

Software capabilities

As a leading provider of documentation and project delivery services Atlas staff are conversant with most current industry-leading software applications and platforms.

Our delivery teams are trained in at least two of our three core delivery platforms, Revit, ArchiCAD and AECOsim. In addition to this our specialist teams receive training and are skilled in the use of software platforms relevant to their client's needs, be it for Architectural, Structural or MEP Engineering projects.

Collaborative working tools include the use of Revit Server, Navisworks and Solibri.

Atlas staff regularly contribute to and take part in software industry events, including Autodesk, Graphisoft and Bentley annual events in Vietnam, UK, Australia, Holland and Singapore.

Training takes place in our dedicated CAD training facility in Saigon. Atlas also provides training to external organisations through our Autodesk and Graphisoft certified training programmes.
